A CATALOGUE AND HOST LIST OF THE ANOPLURA

BY  
G. F. FERRIS  
*Of Stanford University*

INTRODUCTION

The Anoplura (sucking lice) have long been much neglected and much misunderstood, for as late as 1904 no critical, comparative study of the group had ever been made; and this in spite of the fact that the group had had a place in two monumental works upon parasitic insects, *Insecta Epizoa* of Giebel and *Les Pediculines* of Piaget. With the exception of a few forms of such peculiar nature that they were almost of necessity given generic rank, the species were for the most part lumped under the genus *Hæmatopinus* and all were regarded as forming a single family, the Pediculidae. In 1904, Enderlein, in a series of "*Lausestudien*" published in the *Zoologischer Anzeiger*, broke up the all-inclusive genus *Hæmatopinus* into several genera and elevated this group, as well as certain other groups, to family rank.

There has been some objection to this procedure, but on the whole it has been amply justified by time. The old classification was based upon lack of knowledge and served only successfully to conceal a wealth of remarkably interesting bio-

logical facts that the newer classification has revealed and emphasized. The remarkable degree to which these parasites are broken up into natural groups that are strictly confined to closely related groups of hosts, is now clearly evident, while previously it was barely hinted at. The problem of their distribution is shown to be almost exclusively the problem of the genetic relationships of their hosts.

In 1908 there appeared, as a part of Wytsman's *Genera Insectorum*, a catalogue, compiled by Dalla Torre, based upon the work of Enderlein. This catalogue has proved of immense value, but the knowledge of the Anoplura has increased so rapidly since its publication that the additions and corrections have now attained a bulk almost rivaling the original catalogue, and it therefore seems well that a new catalogue should be issued.

These changes and additions may briefly be summarized. Since 1909 nine valid genera have been added to the list and approximately 60 species have been described (the previous catalogue listed 65, the present one lists 120). The position of numerous species then in doubt has since been cleared up and many of the question marks have been removed, this being the case especially with the North American species described by Osborn, almost all of which were then in doubt but have since been cleared up. More significant, perhaps, than the description of new genera and species is the improved standard of work that has been established. The magnificent "Monographie der Robbenläuse" of Enderlein, in the report of the "Deutsche Südpolar Expedition," and the careful and critical work of Fahrenholz, Cummings, and Neumann, form a splendid contrast to the superficial and often inaccurate work that formerly prevailed.

The synonymy of many of the hosts and some of the parasite species is still badly tangled. The hosts have frequently been referred to only by their vernacular names and when the scientific names have been used they have sometimes been inaccurate, added to which the instability of mammal nomenclature has not been conducive to clearness. The synonymy of the North American mammals has in part been worked out from the "List of North American Land Mammals in the United States National Museum" (Miller, 1911), and, in ad-

dition, the authorities of the Museum of Vertebrate Zoology of the University of California have been extremely kind in helping to clear up numerous matters. The synonymy of the European mammals has been worked out from the "Catalogue of the Mammals of Europe" (Miller, 1912). The synonymy of the Primates has been taken from Elliot's "A Review of the Primates" (1912), but it is very probably still far from correct. The synonymy of other species, when not obtainable elsewhere, has been reduced to the basis of Trouessart's "Catalogus Mammalium" (1899), although it has been necessary to do this only in the case of some of the older species. The host names given in the list of Anoplura are as nearly as can be determined the correct ones. In the host list the names in parentheses are regarded as synonyms, the others are correct as far as available information permits. An attempt has been made to list all the host names that have at any time been used.

#### SYSTEMATIC POSITION OF THE ANOPLURA

*Anoplura* Leach, Edinburgh Encyclopedia (1817); Enderlein, Zool. Anz., vol. 28, pp. 121-147 (1904); Mjöberg, Ark. f. Zool., vol. 6, pt. 13 (1910); Cummings, An. Mag. Nat. Hist., ser. 8, vol. 15, pp. 256-259 (1915).

*Pediculinæ* Burmeister, Handbuch d. Ent., vol. 2, p. 52 (1835).

*Siphunculata* Meinert, Videnskabelige Meddelelser (1896); Cholodkovsky, Zool. Anz., vol. 27, p. 527 (1904).

*Pseudorhyncota* Cholodkovsky, Zool. Anz., vol. 27, p. 125 (1903).

*Lipognatha* Börner, Zool. Anz., vol. 27, p. 527 (1904).

*Ellipoptera* Shipley, ibid., vol. 27, p. 261 (1904).

The systematic position of the Anoplura has always been a matter of doubt and dispute. Because of their parasitic habits they were for a long time classed with the Mallophaga, but later under the influence of the "biting- or sucking-mouth-parts" fetish, the two groups were separated and the Anoplura were placed with the Hemiptera, of which they have for some time been regarded as a suborder most frequently known as Parasita. Their position here has quite generally been re-

garded as rather definitely fixed, but within the last few years evidence has been found which indicates that a readjustment is again desirable.

Handlirsch and Cholodkovsky have favored an arrangement which restores the Anoplura and Mallophaga to a position very similar to that which they originally held in relation to each other, and other authors have brought forward evidence in support of this view. As a result of a comparative study of the two groups Mjöberg has concluded that they are really quite closely related, the Anoplura being merely a further adaptation to a parasitic life, and with this view Kellogg and Cummings are inclined to agree. Enderlein alone, of recent authors, has contended for retaining the Anoplura as a sub-order of Hemiptera. The evidence is too voluminous to be reviewed here, but it indicates very strongly that the Anoplura really have nothing to do with the Hemiptera and are related to the Mallophaga. It seems best to regard the Anoplura as a distinct order and in the latest classification of the Insecta, that of Brues and Melander, this is done. However, the problem of their relationships is still an open question which can only be settled by much more careful comparative morphological studies.

The classification within the order itself is extremely simple; too little is known about the group for the classification to be otherwise. Four families, all of which apparently form quite natural groups, are recognized. Of these, one, Hæmatomyzidæ, contains a single remarkable species (with a possible variety) which occurs upon elephants. Another small family, Echinophthiriidæ, is limited in its occurrence to marine mammals, its peculiarities being ascribable to adaptation to the aquatic life of the hosts. The Pediculidæ include the species found upon man, apes and monkeys, and the remainder of the species are contained in the family Hæmatopinidæ.

Nearly as many species have been described since 1908 as had been described previous to that time, but in spite of this activity the study of the group has hardly begun. The host list, when compared with a list of the mammals of the world, is pitifully small, as is instanced by the fact that there are but four records of Anoplura from mammals of the South Ameri-

can region. It is certainly not unsafe to estimate that the number of known species is not more than one-fifth of those that actually exist.

## KEY

## To FAMILIES, SUBFAMILIES AND GENERA OF ANOPLURA.

- 1—Body thickly beset with more or less short, stout spines, or with spines and scales. Occurring exclusively on marine mammals. Family ECHINOPHTHIRIIDÆ..... 2  
 Body with spines or hairs always in definite rows, never with scales. Occurring exclusively on land mammals ..... 4
- 2—Thorax and abdomen bearing delicate scales. Antennæ four- or five-segmented. Subfamily ANTARCTOPHTHIRIINÆ ..... 3  
 Thorax and abdomen without scales. Antennæ four-segmented.  
 Subfamily ECHINOPHTHIRIINÆ.. Genus *Echinophthirius*
- 3—Antennæ four-segmented..... Genus *Lepidophthirus*  
 Antennæ five-segmented..... Genus *Antarctophthirus*
- 4—Head tubularly produced anteriorly; tibiæ without a thumb-like process opposing the claw. Family HÆMATOMYZIDÆ. One genus, *Hæmatomyzus*, occurring on elephants.  
 Head not so produced; tibiæ with thumb-like process opposing the claw..... 5
- 5—Eyes lacking. Family HÆMATOPINIDÆ..... 9  
 Eyes present, well pigmented. Occurring on man, apes and monkeys. Family PEDICULIDÆ..... 6
- 6—Antennæ distinctly five-segmented, abdomen without pleural plates. Subfamily PEDICULINÆ..... 8  
 Antennæ three-segmented or obscurely five-segmented, abdomen with pleural plates. Subfamily PEDICINÆ ..... 7
- 7—Legs all with slender, pointed claws, abdomen with three pairs of pleural plates..... Genus *Pedicinus*  
 Anterior legs with slenderer claw than the others, abdomen with two pairs of pleural plates.....  
 ..... Genus *Phthirpedicinus*

- 8—Legs all of same size..... Genus *Pediculus*  
     Anterior legs much smaller than others... Genus *Phthirus*
- 9—Antennæ five-segmented..... 11  
     Antennæ three-segmented. Subfamily EUHÆMATOPI-  
     NINÆ ..... 10
- 10—Posterior legs with stalked, disk-shaped appendages on  
     femur and tibia..... Genus *Euhæmatopinus*  
     Posterior legs without such appendages.....  
         ..... Genus *Hæmatopinoides*
- 11—Legs and claws all practically of equal size.....  
     Subfamily HÆMATOPININÆ..... Genus *Hæmatopinus*  
     Anterior legs smaller and with slenderer claw than  
     the posterior pair, at least. Subfamily LINOGNATHINÆ..12
- 12—Anterior tarsi with two joints..... Genus *Hybophthirus*  
     Anterior tarsi with but one joint..... 13
- 13—Anterior tarsi with a short, claw-like process in addi-  
     tion to the claw..... Genus *Scipio*  
     Anterior tarsi not so..... 14
- 14—Abdomen with well developed pleural plates..... 18  
     Abdomen entirely without pleural plates..... 15
- 15—Abdomen with more than one row of hairs or spines  
     on each segment..... Genus *Linognathus*  
     Abdomen with but one row of hairs on each segment..16
- 16—Gonapods moderately long, behind each gonapod a  
     stout, flat, spine-like process..... Genus *Cervophthirius*  
     Gonapods very short, no flat, spine-like process behind  
     them..... Genus *Hæmodipsus* (in part)
- 18—Anterior pair of legs equal to middle pair, both pairs  
     very small, posterior pair large and stout.....  
         ..... Genus *Enderleinellus*  
         Anterior legs smaller than either middle and poste-  
         rior legs and with much smaller and more slender claw.19
- 19—Second or third abdominal sternite with a chitinized  
     plate or area near each lateral margin. Genus *Fahrenholzia*  
     Second or third abdominal sternite without such  
     plates ..... 20
- 20—Abdominal segments with but a single transverse row  
     of spines..... 21  
     Abdominal segments, at least in part, with two or  
     more transverse rows of spines..... 22

- 21—Occiput deeply sunk into the thorax, rostrum surrounded by denticles, pleural plates quite large.....  
 .....Genus *Eulinognathus*  
 Occiput not deeply sunk into the thorax, rostrum not surrounded by denticles, pleural plates minute....  
 .....Genus *Hæmodipsus* (in part)
- 22—Abdominal tergites and sternites with not more than two rows of hairs or spines.....23  
 Abdominal tergites and sternites in part with three rows of hairs or spines.....Genus *Hoplopleura*
- 23—First antennal segment with a short, stout spine at the distal post axial angle or on the posterior margin.....  
 .....Genus *Neohæmatopinus* (in part)  
 First antennal segment not so.....24
- 24—Posterior margin of second abdominal tergite of male distinctly emarginate with a group of spines at each end of this emargination...Genus *Neohæmatopinus* (in part)  
 Posterior margin of second abdominal tergite of male not thus emarginate.....25
- 25—Abdomen with distinct, chitinized tergal and sternal plates in both sexes.....Genus *Polyplax*  
 Abdomen without distinct, chitinized tergal and sternal plates in the female and with these absent or extremely reduced in size in the male..Genus *Linognathoides*

#### Family *Pediculidæ*

Leach, Zool. Misc., Vol. 3, p. 64 (1817); Giebel, Insecta Epizoа, p. 21 (1874); Piaget, Les Ped., pp. 615-618 (1880); Enderlein, Zool. Anz., Vol. 28, p. 136 (1904); Dalla Torre, Gen. Ins., Anopl., p. 8 (1908).

Antennæ five- or three- (obscurely five-) segmented. Eyes present, distinctly pigmented. Legs fitted for climbing, the tibiæ with a thumb-like process opposing the claw. No pretarsal sclerite between tibia and tarsus. Parasitic upon man, apes, and monkeys.

#### Subfamily *Pediculinæ*

Enderlein, Zool. Anz., Vol. 28, pp. 136, 138 (1904); Dalla Torre, Gen. Ins., Anopl., p. 8 (1908).

Antennæ distinctly five-segmented. No pleural plates.

Genus *Pediculus* Linnæus

Linnæus, *Systema Naturæ*, ed. 10, p. 610 (1758); Denny, *Mon. Anopl.*, pp. 12-13 (1842); Giebel, *Ins. Epizoa*, pp. 27-30 (1874); Piaget, *Les Ped.*, pp. 619-623 (1880); Endelerin, *Zool. Anz.*, Vol. 28, pp. 136, 138 (1904).

Head short. Legs all of approximately the same size. Abdomen elongated. Spiracles small. Abdominal segments without lateral projections, and with numerous small spines.

Type of the genus *P. capitis* De Geer.

1—*Pediculus mjöbergi*, new name. From *Ateleus* sp.? (traveling menagerie, Europe).

1910. *Pediculus affinis* (not of Burmeister), Mjöberg, *Ark. f. Zool.*, Vol. 6, pt. 13, pp. 169-171, f. 85.

2—*Pediculus capitis* De Geer. From man. Also recorded from *Ateleus ater* (locality unknown) and from *Cebus fatuellus* and *Cebus* sp. (Rio de Janeiro, S. America).

1758. *Pediculus humanus* Linnæus, *Syst. Naturæ*, 10th ed., p. 610.

1778. *Pediculus humanus* var. I, Linnæus, *ibid.*, 12th ed., Vol. 2, p. 1016.

5—*Pediculus lobatus* Fahrenholz. From *Ateles pan* (Berlin Museum).

1913. *Pediculus lobatus* Fahrenholz (without description), Zool. Anz., Vol. 41, p. 373.

6—*Pediculus oblongus* Fahrenholz. From *Hylobates concolor* and *Hylobates syndactylus*.

1913. *Pediculus oblongus* Fahrenholz (without description), Zool. Anz., Vol. 41, p. 373.

7—*Pediculus schäffi* Fahrenholz. From *Pan* sp.?

1910. *Pediculus schäffi* Fahrenholz, Zool. Anz., Vol. 35, p. 714.

Genus *Phthirus* Leach

*Phthirus* Leach, Edinburgh Encycl., Vol. 9, p. 77 (1815); Zool. Misc., Vol. 3, p. 64 (1817); Enderlein, Zool. Anz., Vol. 28, pp. 136, 138 (1904); Dalla Torre, Gen. Ins., Anopl., p. 9 (1908).

*Phthirius* Burmeister, Handbuch der Entomologie, Vol. 2, p. 1 (1835); Denny, Mon. Anopl., pp. 8-9 (1842); Giebel, Ins. Epizoa, pp. 23-27; pl. 1, f. 8 (1874); Piaget, Les Ped., pp. 628-630; pl. 51, f. 5 (1880).

Anterior legs much smaller and with much slenderer claws than the others. Abdomen short and broad, the fifth to eighth segments with conical lateral processes. Spiracles large, those of the first three abdominal segments crowded close together.

1—*Phthirus pubis* Linnæus. From man.

- 1758. *Pediculus pubis* Linnæus, Syst. Naturæ, ed. 10, p. 611.
- 1817. *Phthirus inguinalis* Leach, Edinburgh Encycl., Vol. 9, p. 77.
- 1818. *Pediculus tabescentium* Alt. De Phthiriasi.

- 1904. *Phthirus pubis* Enderlein, Zool. Anz., Vol. 28, p. 136.
- 1908. *Phthirus pubis* Dalla Torre, Gen. Ins., Anopl., p. 9.

Subfamily *Pedicininae*

Enderlein, Zool. Anz., Vol. 28, pp. 136, 138 (1904); Dalla Torre, Gen. Ins., Anopl., p. 9 (1908); Fahrenholz, Jahresb. d. Niedersäch. Zool. Ver., pp. 28-29 (1912).

Antennæ three-segmented or obscurely five-segmented. Head more or less elongated. Abdomen with a single row of many very small spines on each segment. Pleural plates present on certain abdominal segments.

NOTE: The synonymy of the species in this subfamily has been dealt with by Fahrenholz and, although it is still far from clear, his conclusions have been adopted here.

Genus *Pedicinus* Gervais

Gervais, Aptères, Vol. 3, p. 301; pl. 48, f. 1 (1844); Giebel, Ins. Epizoa, pp. 32-33 (1874); Piaget, Les Ped., pp. 630-632 (1880); Dalla Torre, Gen. Ins., Anopl., p. 9 (1908); Fahrenholz, 2-3-4th Jahresb. d. Niedersäch. Zool. Ver., pp. 12-16 (1912).

All legs with slender, pointed claws of nearly the same size. Abdomen with three pairs of pleural plates.

Type of the genus *Pedicinus eurygaster* Piaget.

1—*Pedicinus breviceps* Piaget. From *Lasioptyga mona*. Also from *Cercopithecus*, sp., and *Pithecius albifrons*.

NOTE: This probably belongs to the *Pediculidæ*.

Family *Hæmatopinidæ*

Enderlein, Zool. Anz., Vol. 28, pp. 136, 137 (1904); Dalla Torre, Gen. Ins., Anopl., p. 10 (1908).

Eyes lacking. Antennæ three- or five-segmented. Tibiæ with a thumb-like process opposing the claw.

Subfamily *Hæmatopininæ*

Enderlein, Zool. Anz., Vol. 28, pp. 136, 138 (1904); Dalla Torre, Gen. Ins., Anopl., p. 10 (1908).

Antennæ five-segmented. Anterior legs of practically the size of the others. A triangular skeletal piece (pre-tarsal sclerite) present between tibia and tarsus.

Genus *Hæmatopinus* Leach

Leach, Zool. Misc., Vol. 3, pp. 64-65, f. 146 (1817); Deny, Mon. Anopl., pp. 24-25 (1842); Giebel, Ins. Epizoa, pp. 33-35 (1874); Piaget, Les Ped., pp. 633-635 (1880); Enderlein, Zool. Anz., Vol. 28, p. 138 (1904); Neumann, Arch. de Par., Vol. 13, pp. 529-532 (1909); Dalla Torre, Gen. Ins., Anopl., p. 10 (1908); Kellogg & Ferris, Anopl. and Mall., p. 10 (1915).

Head with very sharp, forward pointing temporal angles. Thorax broad. Legs all of practically the same size, with a strongly chitinized skeletal piece between tibia and tarsus. Abdomen with a swollen, pad-like, chitinized area on the lateral margins of the third to eighth segments. Tergites and sternites with a varying number of small chitinized plates. Each tergite and sternite with one transverse row of very small hairs.

Recorded from *Perissodactyla* and *Artiodactyla*.

Type of the genus, *Hæmatopinus suis* (Linnæus).

*Linognathinæ* Enderlein, Zool. Anz., Vol. 29, p. 194 (1905).; Dalla Torre, Gen. Ins., Anopl., p. 11 (1908).

Antennæ five-segmented. Anterior legs always distinctly smaller and with much slenderer claw than the posterior. No skeletal piece (pre-tarsal sclerite) between tibia and tarsus.

Genus *Enderleinellus* Fahrenholz

Fahrenholz, Zool. Anz., Vol. 39, p. 56 (1912); 2-3-4th Jahresb. d. Niedersäch. Zool. Ver., pp. 52-58 (1912); Kellogg and Ferris, Anopl. & Mall. of N. Am. Mam., p. 40 (1915).

Anterior and middle pairs of legs of equal size, small and with slender claws. Posterior legs very large and stout, with stout claw. Head entirely without temporal angles. Abdomen with or without chitinized tergal and sternal plates. Abdominal segments for the most part with but one row of hairs or spines in both male and female. Third sternite usually with a widely separated pair of chitinized plates or areas, one near each lateral margin. Pleurites present on second to fifth or sixth segments.

Recorded only from *Sciuridæ* and *Petauristidæ* (Rodentia).

Type of the genus *Enderleinellus spherocephalus* (Nitzsch).

#### Genus *Fahrenholzia* Kellogg & Ferris

Kellogg and Ferris, Anopl. and Mall. of N. Am. Mam., p. 32.

Antennæ similar in sexes. Head and thorax very small. Anterior legs small with slender claw. Middle and posterior legs much larger, sub-equal, with stout claws. Abdomen without chitinized tergal and sternal plates. Each abdominal segment with but one row of spines in both male and female. Pleural plates present on a variable number of segments. Sternite of second segment with a large chitinized plate near each lateral margin. Spiracles small.

Recorded only from *Heteromyidæ* (Rodentia).

Type of the genus *Fahrenholzia pinnata* Kellogg & Ferris.

1—*Fahrenholzia pinnata* Kellogg & Ferris. Type from *Dipodomys californicus* (California, U. S. A.). Also from *Dipodomys deserti*, *D. merriami*, *Perodipus* sp. and *Microdipodops polionotus* (California) and *Perognathus parvus olivaceous* (Nevada, U. S. A.).

Genus *Hoplopleura* Enderlein

*Hoplopleura* Enderlein, Zool. Anz., Vol. 28, pp. 221-223 (1904); Dalla Torre, Gen. Ins., Anopl., p. 14 (1908); Fahrenholz, 2-3-4th Jahresb. Niedersäch. Zool. Ver., pp. 44-46 (1912); Kellogg & Ferris, Anopl. & Mall. of N. Am. Mam., pp. 15-16 (1915).

*Hæmatopinus (Polyplax)* Neumann, Arch. de Par., Vol. 13, p. 531 (1909).

Antennæ similar in the sexes. Anterior legs small with slender claw; middle legs larger with stouter claw; posterior legs very stout with stout, heavy claw and usually with a small, pointed protuberance on the anterior margin of the tibia. Female with most of the abdominal tergites divided into three transverse plates, each bearing a row of spines. Males with most of the abdominal tergites and sternites divided into two plates or undivided, but with some divided into three. Anterior division of the third sternite in both sexes with two pairs, or with two groups of three very stout and conspicuous spines. Pleural plates present.

From *Muridæ* and *Sciuridæ* (Rodentia).

Type of the genus *Hoplopleura acanthopus* (Burm.).

1—*Hoplopleura acanthopus* (Burm.). Type from *Microtus arvalis* (Europe). Also from *Microtus agrestis*, *Mus musculus* and (?) *Sorex araneus* (Europe) and *Dicrostonyx torquatus* (Pitlekaj).

Genus *Hybophthirus* Enderlein

Enderlein, Denksch. d. Med.-Naturw. Gesell. zu Jena, Vol. 14, p. 79 (1909); Cummings, Bul. Ent. Res., Vol. 4, p. 44 (1913).

Tarsus of anterior legs two-segmented, of the remainder one-segmented. Anterior legs small and slender, middle and posterior legs large and stout. Abdomen without strongly chitinized tergites and sternites. Pleural plates present. Thorax with a flattened triangular process on the dorsum near each lateral margin.

Recorded only from Orycteropodidae (Tubulidentata).

Type of the genus *Hybophthirus notophallus* (Neumann).

Genus *Linognathoides* Cummings

Cummings, Bul. Ent. Res., Vol. 5, pp. 159-160 (1914); Kellogg & Ferris, Anopl. & Mall. of N. Am. Mam., pp. 23-24 (1915).

In general similar to *Polyplax*. Abdomen without chitinized tergal and sternal plates or with these very much reduced. Pleural plates present. Spiracles small.

Recorded from Muridæ and Sciuridæ (Rodentia).

Type of the genus *Linognathoides citelli* Cummings.

1—*Linognathoides citelli* Cummings. From *Citellus leptodactylus* and ? *Cricetulus phœus* (Transcaspia).

*Hæmatopinus* (*Linognathus*) Neumann, Arch. de Par., Vol. 13, pp. 529-530 (1909).

Head usually rather slender and elongated. Temporal angles not prominent. Middle and posterior legs nearly equal in size, larger and stouter than the anterior. Abdomen entirely without chitinized tergal, sternal and pleural plates. Each abdominal segment with two or three transverse rows of hairs. Spiracles large. Gonapods usually long.

From *Perissodactyla*, *Artiodactyla*, *Hyracoidea*, and from the domestic dog.

Type of the genus *Linognathus piliferus* (Burm.).

1—*Linognathus angulatus* (Piaget). Type from *Cephalophus nigrifrons* (Africa). Also from *Cephalophus natalensis* and *Cephalophus* sp. (Africa).

1885. *Hæmatopinus ungulatus* Piaget, Les Ped., Suppl., p. 144; pl. 15, f. 7.

NOTE: *ungulatus* is evidently a misprint for *angulatus*, the latter appearing in the description of the plates.

#### Genus *Cervophthirius* Mjöberg

*Cervophthirius* Mjöberg, Ent. Tidskrift, Vol. 36, p. 282 (1915); Ferris, Ent. News, Vol. 27 (in press), 1916.

Differing from *Linognathus* only in the sharp posterior lateral angles of the head and the presence of but a single row of hairs upon each abdominal segment.

Recorded only from Cervidæ (Artiodactyla).

Type of the genus *Cervophthirius tarandi* Mjöberg.

1—*Cervophthirius crassicornis* (Nitzsch). Type from *Cervus elaphus* (Europe). Also from *Odocoileus columbianus* (California, U. S. A.).

 NOTE: It is extremely doubtful if this is at all distinct from *Cervophthirius crassicornis* (N.).

#### Genus *Eulinognathus* Cummings

*Eulinognathus* Cummings, Ann. Mag. Nat. Hist., ser. 8, Vol. 17, p. 90 (1916).

Head longer than broad, antennæ arising just in front of half way, broader behind the antennæ than in front. Behind, the head is sunk deep into the thorax. Around the mouth, in front, a circlet of triangular denticles. Abdomen without tergites or sternites. Five pairs of pleurites, the anterior pair well developed. First pair of legs small, second and third larger, sub-equal. Hairs on the abdomen modified, long, flattened, parallel-sided, truncate at tip, one row on each segment.

Type of the genus *Eulinognathus denticulatus* Cummings. Recorded from *Pedetidæ* and *Dipodidæ* (Rodentia).

- 1—*Eulinognathus denticulatus* Cummings. From *Pedetes caffer*.

#### Genus *Neohæmatopinus* Mjöberg

*Neohæmatopinus* Mjöberg, Ark. f. Zool., Vol. 6, pt. 13, p. 160 (1910); Cummings, Bul. Ent. Res., Vol. 3, p. 393

(1912); Kellogg & Ferris, Anopl. and Mall. of N. Am. Mam., pp. 35-36.

*Acanthopinus* Mjöberg, Ark. f. Zool., Vol. 6, pt. 13, pp. 160-161 (1910).

Antennæ dissimilar in the sexes, the male with a preaxial process or a pair of spines at the apex of the third antennal segment. First antennal segment in both sexes usually with the distal post axial angle more or less produced and bearing a stout spine or with a stout spine on the posterior margin. Anterior legs small, with slender claw, middle and posterior legs larger. Abdomen with or without chitinized tergal and sternal plates. Abdominal tergites and sternites of the female, for the most part, with two transverse rows of spines, male with lesser number, bearing two rows of spines. Posterior margin of second tergite of male always distinctly emarginate with a closely set group of spines of various lengths at the end of this emargination. Pleural plates present. Spiracles small. Gonapods very short.

Recorded from *Sciuridæ* and *Petauristidæ* (Rodentia).

Type of the genus *Neohæmatopinus sciuropteri* (Osborn).

1—*Neohæmatopinus antennatus* (Osborn). Type from *Sciurus cinereus* var. *ludovicianus* (probably *S. niger rufiventer*), (Iowa, U. S. A.). Also from *Sciurus griseus griseus* (California, U. S. A.).

*Eremophthirius* Glinkiewicsz, Sitz. d. Kaiserl. Ak. Wiss. Wien, Natur. Klasse, Vol. 116, pp. 381-383 (1907).

Antennæ sometimes differing in the sexes, the male frequently having the third segment with a distal, preaxial process. Anterior legs small with slender claw, middle legs larger with stouter claw, posterior legs somewhat larger and with heavier claw than the middle. Female with most of the abdominal tergites and sternites divided into two transverse plates, each bearing a row of spines or hairs. Male with a smaller number of tergites and sternites thus divided. Pleural plates present. Spiracles small.

One species recorded from *Soricidæ* (Insectivora), one from *Myoxidæ* (Rodentia), the remainder from *Muridæ* (Rodentia).

Type of the genus *Polyplax spinulosa* (Burm.)

#### Genus *Scipio* Cummings

Cummings, Bul. Ent. Res., Vol. 3, p. 393 (1913); Ferris Ann. Durban Mus., Vol. 2 (in press).

Antennæ not differing in the sexes. Middle and posterior legs subequal in size, large and with pointed claws. Anterior legs small and slender with slender claw and, arising close beside it, a curved, claw-like process. Abdomen large and soft, entirely without chitinized tergal and sternal plates except in the male, where these plates may be present as very narrow, transverse areas. Each segment with a single transverse row of spines. Pleurites present. Gonapods very short. Spiracles small. Male resembling female except for smaller size.

Recorded only from Octodontidae (Rodentia).

Type of the genus, *Scipio aulacodi* (Neumann).

1—*Scipio aulacodi* (Neumann). Type from *Thryonomys swinderianus* (Africa). Also from *Thryonomys* sp. (Zululand, South Africa).

1909. *Hæmatopinus (Polyplax) præcisus* Neumann, Arch. de Par., Vol. 13, pp. 523-524, f. 23.

NOTE: This seems to include the male of one species and the female of another; it is probable that they belong to different genera.

2—*Hæmatopinus (Linognathus) squamulatus* Neumann.  
From unknown host (Dire-Daoua, Abyssinia).

1911. *Hæmatopinus (Linognathus) squamulatus* Neu-  
mann, Arch. de Par., Vol. 14, pp. 401-403; f.  
1-4.

NOTE: This is neither *Hæmatopinus* nor *Linognathus*; it  
approaches *Scipio* in certain respects, but possibly represents an  
undescribed genus.

3—*Hæmodipsus parvus* Kellogg & Ferris. From *Lagidium*  
*peruanum* (Peru, South America).

and Mall. of N. Am. Mam., pp. 30-32, t. f. 12;  
pl. 2, f. 4; pl. 4, f. 6.

NOTE: This may possibly belong to *Eulinognathus*. The  
species was described from immature specimens.

#### Subfamily *Euhæmatopininae*.

Enderlein, Zool. Anz., Vol. 28, pp. 136, 138 (1904); Dalla  
Torre, Gen. Ins. Anopl., p. 15 (1908).

Separated from the other subfamilies of the Hæmatopin-  
idæ only because of the three-segmented antennæ.

#### Genus *Euhæmatopinus* Osborn

Osborn, Bul. 5, n. s., U. S. Dept. Agr., Div. Ent., p. 186  
(1896); Enderlein, Zool. Anz., Vol. 28, pp. 136, 140 (1904);  
Dalla Torre, Gen. Ins., Anopl., p. 16 (1908); Kellogg & Fer-  
ris, Anopl. & Mall. of N. Am. Mam., pp. 46-47 (1915).

Anterior and middle legs of nearly same size; posterior legs  
much larger and heavier, with broad, heavy claw, and with a  
stalked, disk-shaped appendage on femur and tibia. No tergal  
and sternal plates. Pleural plates present.

Type of the genus, *Euhæmatopinus abnormis* Osborn.

*Lepidophthiriidæ* (in part) Mjöberg, Ark. f. Zool., Vol. 6, pt. 13, p. 177 (1910).

Antennæ four- or five-segmented. Legs with a thumb-like process opposing the claw, the anterior pair small with slender claw, the other pairs extremely large with blunt, heavy claws. Abdomen without pleural, tergal or sternal plates.

Thorax and abdomen thickly beset with spines or with spines and delicate scales. Occurring only on marine mammals.

Subfamily *Echinophthiriinae*

Enderlein, Deut. Südpolar Exp., Vol. 10, p. 506 (1909).

Antennæ four-segmented. Abdomen thickly beset with spines but without scales.

Genus *Echinophthirius* Giebel

Giebel, Zeitschrift f. ges. Naturw., Vol. 37, p. 177 (1871); Piaget, Les Ped., p. 656 (1880); Dalla Torre, Gen. Ins., Anopl., p. 17 (1908); Enderlein, Zool. Anz., Vol. 28, p. 137 (1904); Ibid., Vol. 29, p. 661 (1906); Deut. Südpolar Exp., Vol. 10, p. 507 (1909).

Antennæ four-segmented. Body without scales but thickly beset with stout spines.

#### Subfamily *Antarctophthiriinæ*

Enderlein, Deut. Südpolar Exp., Vol. 10, p. 506 (1909).

Antennæ four- or five-segmented. Thorax and abdomen beset with many stout spines and with delicate scales.

#### Genus *Antarctophthirus* Enderlein

*Antarctophthirus* Enderlein, Zool. Anz., Vol. 29, p. 661 (1906); Deut. Südpolar Exp., Vol. 10, p. 506 (1909); Dalla Torre, Gen. Ins., Anopl., p. 17 (1908); Kellogg & Ferris, Anopl. and Mall. of N. Am. Mam., p. 48 (1915).

*Arctophthirus* (in part) Mjöberg, Ark. f. Zool., Vol. 6, pt. 13, p. 178-179 (1910).

Antennæ five-segmented. Anterior legs and claws much smaller than the others, which are extraordinarily large and stout. No sternal plate. No pleural plates. Abdomen and

thorax beset with a great number of short stout spines and with extremely delicate scales. Spiracles small.

From various marine Mammals.

Type of the genus, *Antarctophthirus ogmorrhini* Enderlein.

## HOST LIST OF THE ANOPLURA

The arrangement of the orders is that adopted by Osborn in "The Age of Mammals" (1914). In each case the first name given is the correct name, as nearly as it has been possible to establish it. The names in parentheses are synonyms that have been used in connection with discussions of the Anoplura.

*Phthirus pubis* Linnæus.

#### Primates of Uncertain Position

*Cercopithecus* sp.

*Pedicinus breviceps* Piaget (Zool. Mus. Hamburg).

*Ateles* ape?

*Pediculus mjöbergi* K. & F. (Traveling menagerie, Europe).

*Hamadryas* sp. (perhaps a *Papio*).

*Pedicinus hamadryas*.

Host entirely unknown but undoubtedly a Primate.

*Pedicinus* ? *graciliceps* Piaget.

#### Order ARTIODACTYLA

##### Family SUIDÆ

*Phachochoerus aethiopicus*.

*Hæmatopinus phachochoeri* End. (Nyasa Land, Africa).

*Phachochoerus oeliani massaicus*.

*Hæmatopinus phachochoeri* End. (Africa).

*Phachochoerus* sp.

*Hæmatopinus phachochoeri* End. (Africa).

*Potomochoerus affinis* nyasæ.

*Hæmatopinus phachochoeri* End. (German East Africa).

*Potomachoerus africanus*.

*Hæmatopinus phachochoeri* End. (Africa).

*Potomachoerus choerapotamus*.

*Hæmatopinus phachochoeri* End. (Zululand, South Africa).

*Sus scrofa domestica*.

*Hæmatopinus suis* L. (Cosmopolitan).

*Sus vittatus*.

*Hæmatopinus suis adventicius* Neum. (East Indies).

#### Family CAMELIDÆ

*Auchenia huanaca* (Llama).

*Linognathus prælongiceps* (Neum.) (South America).

*Camelus dromedarius*.

*Hæmatopinus tuberculatus* (Burm.) (Australia, imported from India).

*Camelus bactrianus*.

*Hæmatopinus tuberculatus* (Burm.)

African camels.

*Hæmatopinus tuberculatus* (Burm.) (Cairo, Egypt).

#### Family GIRAFFIDÆ

*Camelopardalis giraffa*.

*Linognathus brevicornis* (Giebel) (Africa).

#### Family CERVIDÆ

*Cervus elaphus*.

*Cervophthirius crassicornis* (Nitzsch) (Europe).

*Cervus unicolor*.

*Hæmatopinus longus* Neum. (Nepaul, India).

*Odocoileus columbianus*.

*Cervophthirius crassicornis* (Nitzsch) (Laytonville, California, U. S. A.).

*Rangifer tarandus*.

*Cervophthirius tarandi* Mjöb. (Sweden).

*Cearrus-Hirsch*.

  ? *Linognathus breviceps* (Piaget) (Guatemala).

## Family BOVIDÆ

## Subfamily CEPHALOPHINÆ

*Cephalophus maxwelli.*

*Linognathus breviceps* (Piaget).

*Cephalophus natalensis.*

*Linognathus angulatus* (Piaget) (Mfongosi, Zululand, S. Africa).

*Cephalophus nigrifrons.*

*Linognathus angulatus* (Piaget).

*Cephalophus* sp.

*Linognathus angulatus* (Piaget) (Zool. Mus. Hamburg).

## Subfamily CERVICAPRINÆ

*Cervicapra arundinum.*

*Linognathus fahrenholzi* Paine (Nyassa Land, Africa).

*Cervicapra fulvorufula.*

*Linognathus fahrenholzi* Paine (Mfongosi, Zululand, South Africa).

## Subfamily ANTILOPINÆ

*Antilope cervicapra.*

*Linognathus tibialis* var. *cervicapræ* (Lucas).

*Antilope euchore.*

*Linognathus tibialis* var. *euchore* Wat. (South African Museum, Cape Town).

*Antilope maori.*

*Linognathus tibialis* (Piaget) (Zoological Garden, Rotterdam).

*Antilope rupicapræ.*

*Linognathus stenopsis* (Burm.).

*Antilope* sp.

*Linognathus tibialis* var. *antennatus* (Piaget).

*Gazella subgutturosa* (*Antilope subgutturosa*).

*Linognathus tibialis* var. *appendiculatus* (Piaget) (Zoological Garden, Rotterdam).

*Gazelle.*

*Linognathus gazella* Mjöberg (Zool. Mus. Hamburg).

## Subfamily TRAGELAPHINÆ

*Taurotragus oryx.*

*Hæmatopinus taurotragi* Cumm. (Menagerie in England).

*Limnotragus gratus.*

*Linognathus limnotragi* Cumm. (Zool. Garden, London, from Congo).

## Subfamily RUPICAPRINÆ

*Rupicapra rupicapra* (Gemse).

*Linognathus rupicapræ* (Rudow) (Europe).

## Subfamily CAPRINÆ

*Capra ibex.*

*Linognathus forficulus* (Rudow) (Europe).

*Capra ægyptica* (Name does not appear in any lists, is possibly *C. ægagrus*).

*Linognathus stenopsis* (Burm.).

*Capra hircus.*

*Linognathus stenopsis* (Burm.).

"Mexican Goat."

*Linognathus stenopsis* (Burm.) (San Diego, California, U. S. A.).

*Ovis aries.*

*Linognathus ovillus* (Neum.) (Scotland and New Zealand).

*Linognathus pedalis* (Osborn) (Minnesota, Iowa, Nevada, U. S. A.).

Sheep.

*Linognathus stenopsis* (Burm.) (Abeokuta, Southern Nigeria, Africa).

## Subfamily BOVINÆ

*Bos taurus.*

*Hæmatopinus eurysternus* (Nitzsch) (Cosmopolitan).

*Linognathus vituli* (L.) (Cosmopolitan).

*Bos grunniens.*

*Hæmatopinus punctatus* Rudow.

*Bos caffer* (*Buffelus caffer*).

*Hæmatopinus bufali* (De Geer) (Africa).

*Bison bison*.

*Hæmatopinus tuberculatus* (Burm.) (North America).

"Common Buffalo."

*Hæmatopinus tuberculatus* (Burm.) (Vienna).

"Buffalo of India, Tonkin, Sumatra and Rumania."

*Hæmatopinus tuberculatus* (Burm.).

#### Order PERISSODACTYLA

*Equus caballus* (Domestic horse).

*Hæmatopinus asini* (L.) (Cosmopolitan).

*Equus asinus* (Ass).

*Hæmatopinus asini* (L.).

*Equus burchelli*.

*Hæmatopinus asini* (L.) (South Africa).

#### Order PROBOSCIDEA

##### Family ELEPHANTIDÆ

*Elephas indicus*.

*Hæmatomyzus elephantis* var. *sumatranus* Fahr. (Sumatra).

*Loxodonta africana* (*Elephas africanus*).

*Hæmatomyzus elephantis* Piaget.

#### Order HYRACOIDEA

##### Family PROCAVIIDÆ

*Procavia capensis* (*Hyrax capensis*).

*Linognathus caviæ-capensis* (Pallas). (South Africa).

*Procavia syriaca* (*Hyrax syriacus*).

*Linognathus leptocephalus* (Ehrenb.) (Syria).

#### Host Unknown

*Hæmatopinus* (*Linognathus*) ? *squamulatus* Neum. (Diri-Daoua, Abyssinia).

## APPENDIX

Since the preceding pages were sent to press the author has received from Mr. Bruce Cummings, of the British Museum, and Mr. James Waterston, of the Imperial Bureau of Entomology, certain notes which are here appended. To both these gentlemen thanks are due.

The addition of these notes makes the Catalogue complete to April 1, 1916.

*Linognathus microcephalus* (Garnett). From domestic sheep (New Zealand).

NOTE: "This is in my opinion the same as *Linognathus pedalis* (Osb.)" (Waterston).

1915. *Hæmatopinus microcephalus* Garnett, Jour. Comp. Pathology and Therapeutics, pp. 2-3, 3 figs.

*Linognathus pithodes* Cummings. From *Antilope cervicapra* (Zool. Garden, London).

1916. *Linognathus pithodes* Cummings, Proc. Zool. Soc., London (March, 1916).

*Hoplopleura pectinata* (Cummings).

NOTE: "*Polyplax pectinata* Cum., is a *Hoplopleura*" (Cummings).

*Echinophthirius horridus* (Olfers).

1816. *Pediculus horridus* Olfers, De Vegetativis et Animalis.

NOTE: "*Echinophthirius phocæ* Lucas, equals *E. horridus* (Olfers)" (Cummings).

*Hoplopleura bidentata* (Neum.). From *Hydromys chrysogaster*; not from *Epimys ratus* (Harrison).

*Linognathus setosus* (Olfers).

1816. *Pediculus setosus* Olfers, De Vegetativis et Animalis.

NOTE: "*Linognathus piliferus* (Burm.) equals *Pediculus setosus* Olfers" (Harrison).
