PREFACE

This checklist has been compiled from personal records and published literature for workers interested in the distribution of parasites of native and feral fauna.

As neither of the authors are parasitologists omissions and errors in classification probably have occurred despite valuable assistance provided by others. Comments and corrections will be welcomed.

The notation used places the name of the author of the parasite after the parasite's name, and a reference to the Tasmanian occurrence of the parasite after the host's name(s).

The list contains only those parasites collected directly from the host.

An asterisk (*) indicates only a tentative determination.
